

3M™ Detection System (Model 3500)

Flexible, reliable, very low frequency system

Designed for use with 3M™ Tattle-Tape™ Security Strips, this stylish, versatile and compact system provides excellent coverage to protect library items from loss. Along with a low frequency signal that minimises interference with surrounding electronic equipment and an adjustable height detection zone, the system can be customised for exits and entrances. The unit can be installed in single- or dual-corridor widths and comes

with a variety of mounting options: direct mount, base plate or buried cable. The Model 3500 is completely safe for all magnetic media, and because it protects library assets directly, there's no need for locking cases. Along with a built-in red alarm light, it features an audible alarm and accurately identifies items that trigger an alarm. In addition, the customer counter records the number of library visitors.

Design/Install Options

- 914mm to 1050mm standard corridor widths
- Single- or double-corridor
- Electronics mounted remotely
